OVERVIEW:

The Temple Group is one of the UK's leading independent infrastructure and property consultancies, specialising in environment, ecology, planning and sustainability. Working with our clients, and with a team comprising many recognised industry leaders, we work on many exciting, complex, challenging and globally relevant projects, programmes and schemes and are proud of our many and varied achievements. We provide a bespoke professional service to clients so that they can make the right decisions and achieve the best outcomes, and we do this by leveraging our experience and breadth of skills alongside our insights, commitment, and ethical approach.

Our current work portfolio includes Environmental Impact Assessments (EIA) and other support for HS2, Transport for the North, Transport for London, iconic property developments and large urban regeneration schemes. We currently provide expert advice to governments, agencies, companies and major infrastructure projects to help them reduce air pollutant and GHG emissions and adapt to the impacts of unavoidable future climate change. We carry out a wide range of bespoke planning, technical and environmental assessments projects – everything from air quality monitoring, climate change policy analysis, through to expert witness support and Health Impact Assessment. We also provide technical support to clients in the private and public sectors, at local and national levels and in the UK and overseas.

Due to our growing portfolio of work we are seeking to add a number of energetic, enthusiastic and dedicated people at Consultant, Senior and Principal level to our Air Quality & Climate Change team. They will assist in the delivery and management of projects, helping to grow our business in this area as well as to further build The Temple Group's market presence.

If you are interested in this role, please send a covering letter to recruitment@templegroup.co.uk, stating your current salary, the role/position/grade you are applying for. Please also attach a copy of your latest full CV.

The Role:-

Our Air Quality & Climate Change Team is headed by an experienced Business Unit Leader and comprises Principal, Senior and Junior consultants. Our new team members will work primarily on air quality monitoring and air quality assessments for infrastructure and property projects. This will include air quality monitoring, data processing and reporting, air pollutant dispersion modelling and the use of Geographic Information Systems (GIS). The role will also support our growing portfolio of climate change projects that include GHG inventory/footprint production, GHG data verification for third parties, project level carbon data analysis and modelling, organisational and project level decarbonisation and net zero advice.

The successful candidates will be expected to work flexibly on both site and desk-based projects. They must be able to demonstrate an ability to work with a variety of clients, understand their needs, and translate these into presentable solutions.

Responsibilities for Consultants will include assisting with air quality and climate change assessments (including EIA) and air pollutant dispersion modelling, undertaking site visits to install, maintain and repair monitoring units, analyse and interpret data sets from various sources for use in assessment, and write technical reports. We would expect the Senior and Principal Consultants to manage and lead projects, contribute innovative ideas to complex analysis and technical advisory projects and oversee the work of junior consultants. The successful candidates will have to be comfortable applying their knowledge to new situations and developing their skills to address future challenges and needs of our business and clients.

The Candidate:-

We expect the successful candidates will:

- Have a degree in a relevant field;
- Have experience in working in consultancy or a related field – Principal Consultant minimum of 7 years, Senior Consultant minimum 4 years, Consultant minimum 2 years;
- Be familiar with the air quality requirements for EIA, air pollutant dispersion modelling, industry standard air quality monitoring techniques and data analysis;
- Be able to demonstrate an understanding of environmental, air pollution and sustainability issues;
- Have a strong work ethic and be organised, flexible and motivated;
- Approach their work in a professional, enthusiastic and proactive manner.

Experience of the following is essential:

- Air quality monitoring;
- Atmospheric dispersion modelling, particularly ADMS;
- Arc-GIS or QGIS;
- Handling and analysis of data in MS Excel or other software packages such as R.;
- Environmental policy analysis;
- Client management and evidenced report writing.

The following aspects would be desirable:

- Understanding of carbon accounting, GHG inventory, footprinting or verification, carbon emissions modelling and climate change EIA inputs, use of appropriate Life Cycle Analysis software;
- A second degree in a similarly relevant field;
- Understanding of AQ health impact pathways and quantification;
- Business development and innovative ideas.

Temple provides a wide range of training to its staff including in house workshops run by our experienced team; seminars and presentations from relevant industry professionals in a wide range of environmental, town planning and sustainability disciplines and external project management training.
