

TEMPLE'S CARBON FOOTPRINT

Temple's carbon footprint is the total greenhouse gas (GHG) emissions produced either directly or indirectly by us for the period of 1 January 2021 – 31 December 2021. It's crucial we measure and understand our carbon footprint to be able to effectively reduce it.

“ Average per Temple employee per Year: 3.03 tCO₂e
UK Average (2019): 5.46 tCO₂e
World Average (2019): 4.76 tCO₂e (ourworldindata.org)

To help avoid the increase of 1.5°C rise in global temperatures, the average carbon footprint would need to drop to under 2.3 tonnes by 2030) (UNEP). **”**
