

TEMPLE SUSTAINABILITY ADVISORY SERVICES

Our Climate and Carbon team has excellent track record across infrastructure and urban development. We prepare bespoke and proportionate carbon assessments to support your net zero ambition.

Our carbon and sustainability specialists can offer the following tailored services:

Carbon Accounting & GHG Verification: Calculating organisational carbon footprint and verifying the accuracy of calculations.

Our experts are on hand at every stage of your footprinting journey to help collect and analyse the data you need, calculate your footprint, verify the accuracy of calculation and/or evidence for corporate emissions, and report the findings.

We help you use your calculated footprint as the baseline to launch your decarbonisation journey.

Corporate Sustainability & Net Zero Strategies: Developing strategies for local authorities and organisations, following Science Based Targets.

Our team of experts can optimise your pathway to net zero carbon by helping you do the following:

- Set robust carbon reduction targets in line with the latest climate science, meeting organisational needs and raising ambition to align with Net Zero.
- Move forward confidently with delivering on those goals – and support you to drive tangible results, by creating practical carbon reduction plans and pathways for your own operations as well as value chain, highlighting cost-effective measures and priorities.
- Assess the feasibility of different carbon reduction pathways in line with Science Based Targets.

Environmental, Social and Governance (ESG): Helping clients understand their ESG responsibilities which are material to their operations and how best to embed those obligations within the context of their wider ethos and sustainability objectives.

We look to embed a social value framework in conjunction with Carbon Reduction and Sustainability Strategy. This plan works in parallel with the above workstreams, linking key identified carbon-sustainable practices with relevant social value outcomes, as well as providing a wider framework with which to capture and measure social value looking forward.

Temple has partnered with an ESG reporting platform to provide our clients with the best software tools for collecting, analysing and reporting sustainability data from the entire organisation and value chain. We are well versed in facilitating deeper insight and utilising this data led understanding of your baseline for targeted advisory support.
